

PermaRoute

With PermaStripe®, one thing was always tough to achieve, and that was printing an irremovable print on to the surface, although it was hard to remove unless someone was persistent enough, we still were not satisfied.

To combat this, we created a new line named PermaRoute. We achieved this immovable print by laminating the surface of the PermaStripe® while still keeping the thickness down to an efficient minimum. We have managed to keep it at a thickness of 0.83mm, which is still extremely durable, as flexible as our regular PermaStripe® and compatible with our line marking applicators.

PermaRoute is available in all the colours PermaStripe® is in. For samples or to find out more information on our PermaRoute, you can contact us by email, phone, or by using the [contact form](#) on this site.
